

Tri SUD system now has 100% normal pressure levels in all areas. If you have no water or very low pressure, please thoroughly check your premises and check your meter.

Our employees have turned off in excess of 30 meters due to broken customer lines running water. Some customers still have low pressure due to all the leaks that are running at other people's homes.

If you are experiencing a problem and don't see a leak, please check your meter. If it is spinning, water is running somewhere on your property and you need to turn off your meter until the problem is located and repaired. If you cannot find your meter or have a leak and cannot turn off your meter, please call the office.
